LUCA MARTIN RIVERA

Full-Stack Developer | Systems Analyst

Neuquén, Argentina | +54 299 609 9114 | lucamartinrivera@gmail.com

Remote | Part-time/contract | Up to 20 hours/week | UTC-3 | lucaunlimited.github.io

PROFILE

Systems Analyst and Electronic Technician building practical software for small teams. Recent paid client work includes two separate business dashboards: one connected to Tango ERP for stock and replenishment, and another covering day-to-day operations and financial workflows. Comfortable moving from requirements and frontend work through APIs, SQL data and ongoing improvements. Available for remote part-time or contract projects, up to 20 hours per week.

PAID CLIENT WORK | INDEPENDENT FULL-STACK DEVELOPER | 2020-PRESENT

TANGODASH | ERP-CONNECTED INVENTORY DASHBOARD

Connects to Tango ERP and brings article, supplier, sales and current-stock information into one stock workflow. Configurable minimum and target levels support suggested replenishment; the team can prepare purchase orders and export reports to Excel or PDF. Client code and data are private.

Next.js | TypeScript | FastAPI | SQL Server | Tango ERP

G2 DASHBOARD | BUSINESS OPERATIONS AND FINANCE

A separate paid project covering stock, supplier rankings, purchasing and delivery notes, cash flow and cheques, payment calendars, expenses, cost of goods, collections and sales trends. Client code and data are private.

Next.js | TypeScript | FastAPI | SQL Server

OTHER SELECTED BUILDS

MeetingBar | Hotel inventory: Spring Boot, React and MySQL; stock counts, orders and warehouse comparison. CanchaUp | Sports bookings: Java, Apache Causeway and PostgreSQL; backend for reservations and teams.

Personal builds: Mesa de Juegos, a mobile-first scorekeeper with shared rooms and offline play; tono, a Spotify playlist organizer with draft review before changes.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS
Backend: Java, Spring Boot, Python, FastAPI, Node.js, REST APIs
Data: SQL Server, PostgreSQL, MySQL, MongoDB
Delivery: Requirements analysis, Git, deployment and maintenance
